

Amendments to the Specification

Please amend the paragraph which begins on page 2, line 4 in the specification as follows:

The present invention addresses and eliminates this size-mismatch problem. It does so by creating and/or using, for subsequent, positive, image-printing control, an image data file which is structured to contain clearly readable, useable, and validated-as-being-correct, information regarding actual original image size. The methodology of the invention is referred to herein as a method for providing printing scale image size and resolution stability control with respect to a digital source image.
